"The current and future landscape of targets for Oncology and Diabetes"

Description: Ongoing challenges for cancer immunotherapies are resistance and lack of efficacy with current treatments. The tumor microenvironment and infiltrating immune cells play an important role in the response to treatment. Combinational therapies are being rigorously tested to overcome these challenges, but additional targets are needed. This presentation will review the current landscape of combinational immuno-oncology therapies, discuss strategies for identifying new combinations, and look the future of the microbiome treatments through the impact of metformin in diabetes.

Presenter: Matthew E. Wampole, Manager, Solution Scientists, Clarivate Analytics

Venue: MR G02, Qatar National Convention Center *(next to Scientific Conference Hall)*

Date and Time: December 09, 2018 01:15 pm to 02:45 pm
